1.

<?php

class Book {

private \$title;

private \$price;

public function \_\_construct(\$title, \$price) {

\$this->title = \$title;

\$this->price = \$price;

}

public function getTitle() {

echo "Title", \$this->title, "<br>";

}

public function getPrice() {

echo "price: \$", \$this->price, "<br>";

}

\$physics = new Books("physics for High School", 10);

\$math = new Books("Advanced Algebra", 10);

\$chemistry = new Books("Chemistry", 7);

\$physics → getTitle();

\$chemistry → getTitle();

\$math → getTitle();

\$physics → getPrice();

\$chemistry → getPrice();

\$math → getPrice();

??

2.

<?php

```
class Sedan extends Car {  
    public function intro(): string {  
        return "Sedan car. It's great for  
            family trips!";  
    }  
}
```

```
$SedanCar = new Sedan("Toyota");  
echo "Car Name: " . $SedanCar->name . "<br>";  
echo $SedanCar->intro();
```

?>
